Overview

People analytics is the use of data and data analysis techniques to understand, improve, and optimize the people side of business. Analytics has the potential to improve the effectiveness of a company's talent acquisition function by replacing manual processes. Recruiting and hiring data can be correlated with business outcomes such as increased revenue to create strategic insights and drive action.

Harvard Business Review identified the biggest obstacles for adoption is "*inaccurate, inconsistent, or hard-to-access data requiring too much manual manipulation*" and a "*lack of analytic acumen or skills among HR professionals.*" Human capital function need to identify question it wants to answer, collect the data, interpret the results, and take action. Analytics will change the recruitment function by automating screening of candidates. This has downstream benefits for performance management, turnover, and workforce planning

This brand new 2 day OYAGSB Professional Certification programme is designed to provide a clear understanding of how to use data and technology in improving human capital effectiveness as well as decision making.
